

MOUNT WITH REPLACEABLE LOAD BEARING AND REBOUND

MEMBERS

ABSTRACT

5 A mount with replaceable load bearing and rebound members is disclosed. The
mount comprises a housing that defines a first chamber and a second chamber; a load
bearing member removably located in said first chamber, said load bearing member
comprising a load bearing member contact portion; a rebound member removably
located in said second chamber, said rebound member having a rebound member
10 contact portion, the contact portions of the load bearing member and rebound member
being in abutment when the members are removably located in the chambers; and
means for coupling said load bearing member and rebound member.
